

## Serologiske analyser

| Agens                         | Antigen | Immun-globulin- | Metode         | Kommentar                     | Forventet svartid |
|-------------------------------|---------|-----------------|----------------|-------------------------------|-------------------|
| <i>Bordetella pertussis</i>   | PT      | IgG             | EIA            | PT: Pertussis toksin          | 1 uke             |
| <i>Borrelia</i>               |         | IgG             | CLIA           |                               | 4-7 dg            |
|                               |         | IgM             | CLIA           |                               | 4-7 dg            |
|                               |         | IgG/IgM         | CLIA           | Nevroborreliose (spinalvæske) | 1 uke             |
| Cytomegalovirus               |         | IgG             | EIA            |                               | 2 dg              |
|                               |         | IgM             | EIA            |                               | 2 dg              |
| Dengue                        |         | Duo IgG/M       |                | Hurtigtest                    | 1 dg              |
| Epstein Barr virus            | VCA     | IgG             | EIA            |                               | 2 dg              |
|                               | VCA     | IgM             | EIA            |                               | 2 dg              |
|                               |         | IgM, heterofile |                |                               | 1 dg              |
| <i>Francisella tularensis</i> |         |                 | Agglutinasjon  | Egenprodusert                 | 1 uke             |
|                               |         | IgG             | EIA            | Egenprodusert                 | 1 uke             |
|                               |         | IgM             | EIA            | Egenprodusert                 | 1 uke             |
| Hantavirus, Puumala virus     |         | IgM             | EIA            | Hurtigtest                    | 1 dg              |
| <i>Helicobacter pylori</i>    |         | IgG             | EIA            |                               | 1 uke             |
| Hepatitt A                    |         | IgM             | CMIA           |                               | 1 dg              |
|                               |         | IgG             | CMIA           |                               | 1 dg              |
| Hepatitt B virus              |         | anti-HBs        | CMIA           |                               | 1 dg              |
|                               |         | HBs-Ag          | CMIA           |                               | 1 dg              |
|                               |         | HBs-Ag          | CMIA           | Konfirmasjonstest             | 3 dg              |
|                               |         | HBe-Ag          | CLIA           |                               | 4-7 dg            |
|                               |         | anti-HBe        | CLIA           |                               | 4-7 dg            |
|                               |         | HBe-total       | CMIA           |                               | 1 dg              |
| Hepatitt C virus              |         | Anti-HCV total  | CMIA           |                               | 1 dg              |
|                               |         | IgG             | recomLine Blot | Konfirmasjonstest             | 1 uke             |
| Herpes simplex virus          |         | IgG             | CLIA           |                               | 1 uke             |
|                               |         | IgM             | CLIA           |                               | 1 uke             |

|  |                     |                                  |                   |        |
|--|---------------------|----------------------------------|-------------------|--------|
| Humant immunsvikt virus 1+2              | Ag/As combo         | CMIA                             |                   | 1 dg   |
|  |                     | Blot                             | Konfirmasjonstest | 4-7 dg |
|  |                     | recomLine Blot                   | Konfirmasjonstest | 4-7 dg |
| Humant parvovirus B19                    | IgM                 | CLIA                             |                   | 1 uke  |
|  | IgG                 | CLIA                             |                   | 1 uke  |
| Meslingvirus                             | IgM                 | CLIA                             |                   | 1 uke  |
|  | IgG                 | CLIA                             |                   | 1 uke  |
| Parotittvirus                            | IgM                 | CLIA                             |                   | 1 uke  |
|  | IgG                 | CLIA                             |                   | 1 uke  |
| QuantiFERON TB GOLD                      |                     | EIA                              | Interferon        | 3-7 dg |
| Rubellavirus                             | IgG                 | CMIA                             |                   | 1 dg   |
|  | IgM                 | CLIA                             |                   | 3 dg   |
| <i>Streptococcus pyogenes</i><br>(Gr.A.) | anti-DNase B        | As                               | Nefelometri       | 1 uke  |
|  | anti-streptolysin O | As                               | Nefelometri       | 1 uke  |
| <i>Toxoplasma gondii</i>                 | IgM/IgG             | CMIA                             |                   | 3 dg   |
|  | IgG, DA-test        | Agglutinasjon                    |                   | 3 dg   |
| <i>Treponema pallidum</i>                | As-total            | CMIA                             |                   | 1 uke  |
|  | As                  | RPR                              |                   | 1 uke  |
|  | As                  | TPPA (agglutinasjon)             |                   | 1 dg   |
| Varicella zoster virus                   | IgM                 | CLIA                             |                   | 1 uke  |
|  | IgG                 | CLIA                             |                   | 1 uke  |
| <i>Yersinia enterocolitica</i>           | As                  | Agglutinasjon (ikke akkreditert) |                   | 1 uke  |
